1 Executive Summary

This report summarizes engineering progress for the third quarter of 2026. The team shipped the OKF-compatible front matter, image sizing, and a redesigned template system, while keeping the build green and the dependency tree audit-clean.

2 Highlights

- **OKF front matter** — canonical field names with backwards-compatible aliases.
- **Image control** — width, height, and alignment via the HTML `<img>` tag.
- **Templates** — a document `type` label and two new templates (`professional`, `letter`).

3 Metrics

Metric	Q2 2026	Q3 2026	Change
Templates shipped	5	7	+2
Open vulnerabilities	4	0	-4
Tests	12	16	+4

4 A Small Formula

The compression ratio is estimated as:

$$r = 1 - \frac{s_{compressed}}{s_{original}} \tag{1}$$

5 Roadmap

1. Surface `status` and `resource` in the document templates.
2. Add multi-author support to the front matter.
3. Expand the template gallery.

6 Conclusion

The quarter delivered a breaking but well-scoped `0.2.0` release. The next quarter focuses on richer metadata rendering and broader template coverage.
